About

Master's Computer Science student (4th semester, University of Passau) seeking a working-student role in backend / software development. Experience building secure REST APIs, OAuth integrations, and containerized microservices with Docker, CI/CD, and automated tests. Strong interest in DevOps and cloud data platforms.

Skills

Technical Skills: Python, Java, C++, TypeScript, PHP | Machine Learning, NLP, scikit-learn, LangChain, Prompt Engineering, Model Integration, Model Serving, Data Preprocessing, Scalable ML Pipelines | Django, Flask, Spring Boot, Spring Security, REST APIs, JWT, ExpressJS, Laravel | React Capacitor, Angular, Flutter | PostgreSQL, MySQL, MongoDB, SQL Server, Firebase, NoSQL | Docker, Kubernetes, CI/CD, GitHub Actions, AWS, Virtualization | Microservices, CQRS, Event-Driven Architecture, OOP | Unit Testing, Integration Testing | Git, Jira, ClickUp, Entity Framework | Agile, Scrum
Languages: English (C1), German (B1), French (B2), Arabic

Professional Experience

Backend Developer	MyOnCare	Munich, germany	05/2026 – present
- Developed backend integrations that securely connect patients' wearable health devices (e.g. glucose monitors, activity trackers) to the company's digital health platform. - Built and maintained REST APIs and microservices to import, process, and store health measurements reliably. - Implemented secure user authorization (OAuth 2.0), consent handling, and account connect/disconnect flows. - Contributed to the patient mobile app (React Capacitor/TypeScript) so users can link and manage their devices. - Debugged and stabilised the full data flow — from external device providers to the platform database — using Git, Docker, code reviews, and automated tests.			
Software Engineer Intern	Omnilink	Tunis, Tunisia	06/2024 – 10/2024
- Built and integrated backend REST APIs and helped manage data flow between microservices in a production environment. - Containerized services with Docker, standardizing builds so the same images ran consistently across development and production. - Set up / maintained CI/CD pipelines (GitHub Actions) to automate build, test, and deployment steps and reduce manual release work. - Contributed to testing and monitoring of running services to catch regressions early and keep deployments stable. - Used Git-based workflows, code reviews, and Agile collaboration; quickly learned new DevOps tools and concepts.			
AI Engineer Intern	Finspot Finance Consultancy	Sousse, Tunisia	05/2023 – 09/2023
- Built secure backend services for financial data processing and document-driven automation workflows. - Implemented JWT authentication and role-based access control to protect APIs and sensitive financial resources. - Developed a microservice that extracted structured data from financial documents and produced consistent outputs for analytics and ML pipelines. - Designed REST endpoints and data handling so extracted records could be stored and reused reliably across downstream services.			

Education

M.Sc. Computer Science	University of Passau, Germany	10/2024 – Present
ICT Engineering Degree	Higher School of Communication of Tunis (SUPCOM)	09/2022 – 06/2024
Pre-Engineering Degree	Monastir Preparatory Engineering Institute, Tunisia	09/2020 – 06/2022
